EDUCATION

Forman Christian College University **Pakistan**
Bachelor of Science in Computer Science *2025*

- CGPA: 3.1
- Relevant Courses: (Data Structures and Algorithms, Database Systems, Artificial Intelligence, Machine Learning, Software Requirements Engineering, Software Quality Assurance, Web Application Development)

WORK EXPERIENCE

NETSOL Technologies *October 2025 - Current*
Associate Software Engineer

- Developed and scaled automated UI test suites using C#, Playwright, and the .NET Framework, automating **150+** end-to-end test cases across **3** enterprise products while contributing to both Automation and Manual QA teams in parallel.
- Transitioned automation to a Python-based BDD framework, implementing feature validation with API interception, backend validation, and data verification, reducing manual testing effort by **75%**.
- Worked extensively on the BMW project, performing feature/UI testing and production issue investigation, while presenting new features and updates directly to the BMW client team.
- Leveraged AI/agentic automation within the Python framework, using BMW domain knowledge to accelerate testing cycles and streamline repetitive validation tasks.

Systems Limited *September 2023 - October 2023*
Digital Automation Intern

- Coordinated with Systems Limited's Digital Automation team, concentrating on **6** UiPath projects.
- Automated repetitive data processing workflows using modern development tools and technologies, cutting manual effort by **40%**.
- Devised and implemented automation solutions, cutting processing time by **50%** for routine departmental tasks, leading to streamlined operations and increased efficiency across the board.

CodSoft *August 2023 - August 2023*
Data Science Intern

- Executed comprehensive data cleaning, preprocessing, and visualization tasks for diverse datasets with over **10,000** records, improving data quality and analysis outcomes.
- Engineered features and developed predictive models using Logistic Regression and Decision Tree Regressor, achieving a **20%** increase in accuracy rates over baseline models.
- Collaborated with a cross-functional team of **8** professionals to analyze and interpret data insights, supporting informed decision-making processes within the organization.

PROJECTS

CareTrax *(Automated Insulin Drip Monitoring System)*

- Built an IoT device to track insulin drip weight with **±2g** accuracy using ESP32, HX711 and Load Cell.
- Designed and deployed a custom Android app integrated with Firebase, enabling real-time monitoring and alert notifications with an average response time under **5** seconds.
- Reduced manual monitoring time by **80%**, improving hospital workflow efficiency.
- Achieved **95%+** uptime and consistent performance through **3** prototype iterations.

SKILLS AND INTERESTS

- **Skills:** Python, SQL, C#, Data Validation, Data Profiling, ETL Testing, Tableau, Data Analysis, Playwright, API Interception, SpecFlow, Data Mining, Data Visualization, Machine Learning, Big Data, MS Excel.
- **Interests:** Artificial Intelligence, Web Automation, IoT Development, E-commerce, Cryptocurrency, Chess.
